SUMMARY

Generative AI Engineer building AI agent automations and RAG and LLM systems, including an autonomous voice cold-calling platform. Works end to end: data and model pipelines, FastAPI backends, Next.js and React frontends, and deployment. Delivered 120+ AI and software projects for international clients, including 50+ repeat clients.

EXPERIENCE

Generative AI Engineer, Algorixe LLC May 2026 – Present

Detroit, MI (Remote)

- Lead development of an autonomous AI cold-calling platform: Twilio Voice calls driven by the Claude API qualify leads, handle objections and book appointments, and every outcome is written back to a built-in CRM.
- Built the surrounding product: FastAPI, SQLAlchemy and Alembic backend, PostgreSQL, JWT authentication with role-based access control, and a Next.js dashboard. Containerized with Docker Compose and Nginx; tested with pytest and Playwright.
- Design and ship AI agent automations and RAG and LLM systems for US business clients.

Generative AI Engineer, BIG IMMERSIVE Sep 2025 – Apr 2026

Lahore, Pakistan

- Built generative AI solutions with large language models, deep learning and generative architectures for real-world applications.

Freelance AI Engineer & Full-Stack Developer, Self-employed Ongoing

Fiverr and Upwork (Remote)

- Delivered 120+ AI and software projects for international clients, more than 50 clients returned for repeat work across Fiverr and Upwork.
- Scope: LLM agents (LangGraph), RAG pipelines, voice agents, computer vision (YOLOv8), and full-stack web applications with React, Next.js, FastAPI, Django and PostgreSQL.

Data Mining / Data Scraping Intern, FastDev Labs June 2024 – Sept 2024

- Built custom data-scraping scripts in Python with BeautifulSoup and Selenium to extract structured data from complex websites.
- Automated large-scale data-collection pipelines with scheduling, retries and proxy handling; cleaned and normalized scraped data with Pandas and regular expressions for dashboards and analytics tools.

SELECTED PROJECTS

SiteLine AI Receptionist (Python, FastAPI, Claude API, Twilio) – Inbound voice agent for construction and inspection businesses: real-time calls over Twilio ConversationRelay with a Claude tool-use loop, designed for about one second voice-to-voice per turn; books into Google Calendar, logs leads to Google Sheets, confirms by SMS. github.com/mr-taha-saqib/SiteLine-AI-Receptionist

Autonomous AI Sales Caller and CRM (FastAPI, PostgreSQL, Next.js, Claude API, Docker) – Outbound and inbound AI calling platform with built-in CRM, JWT and role-based access, tested with pytest and Playwright. github.com/mr-taha-saqib/Autonomous-AI-Sales-Caller-CRM

AI Contract Review and Risk Analysis Assistant (Next.js, TypeScript, Prisma, OpenAI GPT-4o) – Analyzes PDF, DOCX and TXT contracts, detects four clause types, rates risk Low, Medium or High, and answers questions with persistent chat history. github.com/mr-taha-saqib/ai-powered-legal-contract-review-risk-analysis-assistant

CHARM: Chicken Health Assessment and Remote Monitoring (YOLOv8, BoT-SORT, ResNet50, Django) – University project (team of three): detects and classifies infectious coryza, fowl cholera and fowl pox from images and video. github.com/mr-taha-saqib/CHARM-Chicken-Health-Assessment-and-Remote-Monitoring

Micro-RAG over an RDF Knowledge Graph (PyTorch) – TF-IDF retriever plus a from-scratch encoder-decoder Transformer (256-dim, 3+3 layers, 8 heads, no pretrained weights) trained on four tasks. github.com/mr-taha-saqib/Micro-RAG-over-an-RDF-Knowledge-Graph

German SME Bank Transaction Classification (Hugging Face, PyTorch) – Leakage-safe pipeline, 37 classes, five seeds: GermanFinBERT 0.649 ± 0.027 accuracy vs FinBERT 0.612 ± 0.025; temperature scaling and confidence-based routing to manual review. github.com/mr-taha-saqib/german-sme-bank-transaction-classification

SVD-Based Collaborative Filtering (Python) – MovieLens 100K and 1M; SVD k=10 RMSE 0.8812 vs 1.0447 global-mean baseline. github.com/mr-taha-saqib/SVD-Based-Collaborative-Filtering

SEC Filing Connector (Python, Pydantic v2, httpx) – Typed library and CLI for SEC EDGAR filings with 35 passing tests. github.com/mr-taha-saqib/SEC-Filing-Connector

More projects: github.com/mr-taha-saqib?tab=repositories

SKILLS

AI and LLM: LangGraph, retrieval-augmented generation (RAG), tool use and function calling, real-time voice agents (Twilio Voice, ConversationRelay), Claude API, OpenAI API

Machine learning and vision: PyTorch, scikit-learn, Hugging Face Transformers, YOLOv8, BoT-SORT, ResNet, OpenCV, BiLSTM and attention models, model quantization (FP16, INT8)

Backend: Python, FastAPI, Django and Django REST Framework, SQLAlchemy, Alembic, Pydantic, Node.js, Express, REST APIs, WebSockets, JWT authentication

Data stores: PostgreSQL, SQLite, MongoDB, Prisma, SQL

Frontend: React, Next.js, TypeScript, Tailwind CSS, Three.js

Engineering practice: Docker, Docker Compose, Nginx, pytest, Playwright, Git and GitHub, Vercel

EDUCATION

BS, Computer Science – National University of Computer and Emerging Sciences (FAST-NUCES), Lahore, Pakistan 2021 – 2025
